iSMA Android Application

The list below contains modifications and new features

NAME	DESCRIPTION
Application version 4.2 Release date 23.02.2023	**New functions of V2 API:** • HTTP basic authentication enabled; • Added new /api/v2/display endpoint for screen brightness and timeout management; • Added new /api/v2/alarm endpoint for custom sound creator played on a device's speaker; **Improvements:** • New setting to enable and disable API V1/V2 • New Icon **Bugfixes:** • Improved algorithm that would not auto login the user in case of lost connection to the controller • Overridden value of default screen lock setting from "none" to "swipe" fixed. After the panel restarts swiping on the panel screen is no longer needed to access the visualization • Not working sounds from the Niagara Alarm Console fixed
Application version 4.0 Release date 8 Jul 2021	**New functions:** • Support for non-Niagara HTML web servers • Rebuilt Rest API for easier device management – no backward compatibility for the previous application versions **Improvements:** • Updated Rest API documentation • New application graphics based on the Material Design library • Editor view now opens in a full-screen mode • Code refactor for better stability **Bugfixes:** Improved support for Android 6 on 7" panels
Application version 3.1 Release date 25 Nov 2020	**Improvements:** • Language versions added: PL, DE, CZ, IT, HU, LV

Application version 3.0.4 Release date 18 Aug 2020	**New functions:** • PIN protection for stations/users • Export settings to a file • Import settings from a file • Automatic restart option
Application version 2.0	**New functions:** • Possibility to add multiple Niagara stations • http and https protocol for logging in • pop-ups
Application version 1.0	• First release.
